# COSMOPOLITAN PERFECTION

FROM SIMPLICITY COMES PERFECTION

## HAVE YOU EVER WANTED PERFECTION?

PERFECTION from Cosmopolitan takes replacement PVC-U doors to a whole new level. The culmination of many years of research and development has come to fruition to produce one of the most stunning entrance doors available in the market. Perfection blends together the best attributes of current panel designs whilst injecting a fresh new cutting edge approach to glass design.

**Inferior looking plastic resin bevels are a thing of the past with PERFECTION.**

## REACHING NEW BOUNDARIES

PERFECTION truly stretches the boundaries of glass design to the ultimate limit. The finest most intricate detail has been considered in the design and development of this exciting new range, to provide you with the ultimate in kerb appeal for your property. No longer are PVC-U doors just about energy efficiency, they are now also about style, security and performance.

We have created the ultimate in glass obscurity whilst maximising the light that is allowed into your home. To make your choice easy, you will find a simple glass obscurity rating next to each door selection.

Stunning clear decorative glass bevels are stylishly used to create various designs ranging from the simplistic to the truly beautiful. The light that passes through our designs reflect and bounce off the many angled surfaces, creating a spectacular visual effect. Our glass bevels are all handcrafted and go through a meticulous process where attention to detail is second to none. A subtle range of coloured bevels are available creating beautiful transparent colours.

## EASY TO CLEAN

Unlike leaded glass designs, the Perfection range features stunning glass bevels that are encapsulated within the double glazed unit making cleaning easy.

## GLUECHIP GLASS

Gluechip glass is used as standard on all our designs. Gluechip glass is created using an intricate hand-made process where no two pieces of glass are ever the same. The fern like pattern which is created is completely random in nature and enhances the appearance of the glass whilst offering a high level of obscurity.
